

ENERGY POLICY

Elif aims to produce highest quality of products to meet customer expectations in healthy and safe work environments with environment friendly processes which focus on energy efficiency.

In order to sustain the development of energy performance and energy management system; Elif states

- To work in compliance with related regulations, customer requirements and stakeholders expectations,
- To determine KPIs for energy and monitor energy performance,
- To use energy in an efficient way,
- To provide all sources and knowledge required for the employees in order to achieve the performance goals,
- To define energy performance as a key factor in product and process design and to evaluate any tech innovations regarding new investments or modifications accordingly,
- To involve energy consumption as a key factor for purchasing where necessary and available,
- To benefit from recycling options for the energy released from all resources,
- To minimize the amount of lost energy via continuous measurement and tracking systems.

To maintain a successful energy management system, Elif carries out activities in order to support employee competencies for those who may affect significant energy use and to increase energy awareness in all employees for the same cause.
